

FLOOR CARE AND MAINTENANCE

HOW TO CARE FOR YOUR FLOOR SYSTEM:

Wash your floor. Spread an emulsifier, agitate, let stand to loosen soil and rinse. Most standard floor cleaners, cleaning fluids or detergents will not damage the floor system. Always be sure to test for compatibility before using cleaners. Frequency of cleaning will not damage the flooring system.

Floor machines are not recommended, however, if a floor machine is to be used, do not use nylon, Nylogrit pads or black floor pads. Only bassine brushes would be recommended, especially if non-skid finish coat systems have been installed. Mechanical scrubbers may diminish the gloss and cause premature wear of you flooring system.

An APS, llc representative should be consulted for any questions as to the proper maintenance for your flooring system.

Though not required, Applied Polymer Solutions, llc provides outstanding eco-friendly terpene-based cleaning solutions designed to emulsify the toughest greases and soils in most applications.

- Sure-Tough ST 8015 – 100% Biodegradable Non-Foaming Concentrate
- Sure-Tough St 8016 – High Sudsing Water Based Concentrate

MAINTENANCE AND UPKEEP:

The flooring system is a high performance plastic-type paint. The thickness is equivalent to sheets of paper; therefore, it is possible to scratch or gouge your coating should something be slid or scraped across the floor. Should this happen, it is important for the long term performance of the system to perform periodic touch ups of these areas to prevent any further delamination or peeling.

A plan needs to be in place to evaluate the coating system within three to five years for potential recoating. The Urethane topcoat not only provides an attractive, highly cleanable and chemical resistant surface, it also determines the amount of wear the system is receiving. Should it be determined during the evaluation period that the Urethane topcoat has been worn, it is recommended that a new topcoat be applied to preserve the integrity of the base coating system.

For any additional questions, we openly welcome you to contact our representatives for advice regarding your floorings system.
